

## Science Expo Trifold Examples and Guidelines

Below are a variety of examples of what a trifold science/technology project presentation might look like. Students should describe their project question, hypothesis/prediction, evidence (in text and/or pictures/photos) and a conclusion or reflection on the results and possibly the process.

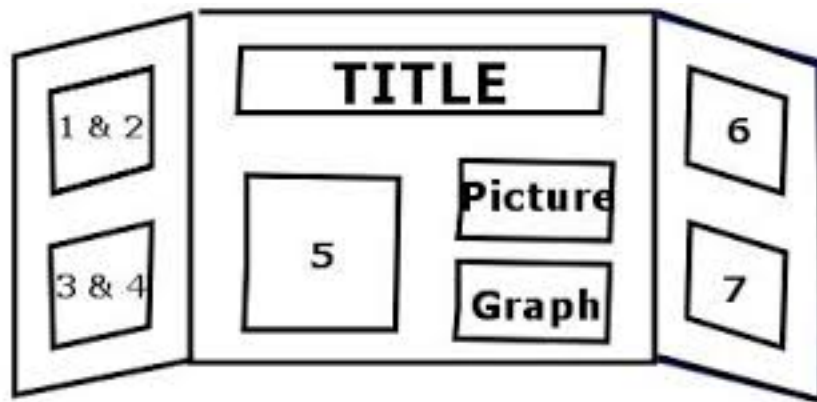

Three projects will be displayed on each table in the cafeteria. Please keep in mind that all of a student's work must fit within this one-third allocation.
